

PilloWIPE®

cleaning critical surfaces

Description

PilloWIPE® is constructed from polyester and micro-fiber based, cleanroom-grade cloths and reticulated, cleanroom-grade foams. The foam sponge is sandwiched between two layers of the fabric to form a unique cleaning tool. PilloWIPE® is designed to enhance the cleaning of difficult to clean surfaces such as tools with sharp edges or high temperatures. PilloWIPE® is designed for use in cleanroom facilities. Available with an abrasive mesh surface for scrubbing applications. Autoclave compatible for use in sterile areas.

Application Advantages

-  Foam sponge interior provides cushioning for scratch sensitive surfaces such as transfer rollers and Electro static chucks.
-  High absorbency and high tear strength make it perfect for heavy duty wiping applications
-  Sponge-like qualities allow screens, stencils, blenders, mixers and mills to be wiped clean with far less cost, cross-contamination and generation of hazardous waste. (Compatible with FWCC Bench Can System.)
-  Please see HazMat Reduction Solutions on the Application Notes page of our website.
-  Sponge-like interior enables aggressive wiping while reducing the risk of generating fibers resulting from abrasion
-  Soft, pliable construction allows for wiping cloth to conform to articulated surfaces for thorough cleaning.
-  Perfect for cleaning hot surfaces in wafer processing equipment such as shower heads (GDP's) and ESC's as a result of high liquid holding capacity.
